ARCHITETTURA SONORA

ICARUS is the new range of speakers designed by Giulia Archimede and developed by Architettura Sonora (AS), conceived to offer an alternative and complementary acoustic solution to our current production, that over the years has made **AS** a benchmark in both outdoor and indoor design.

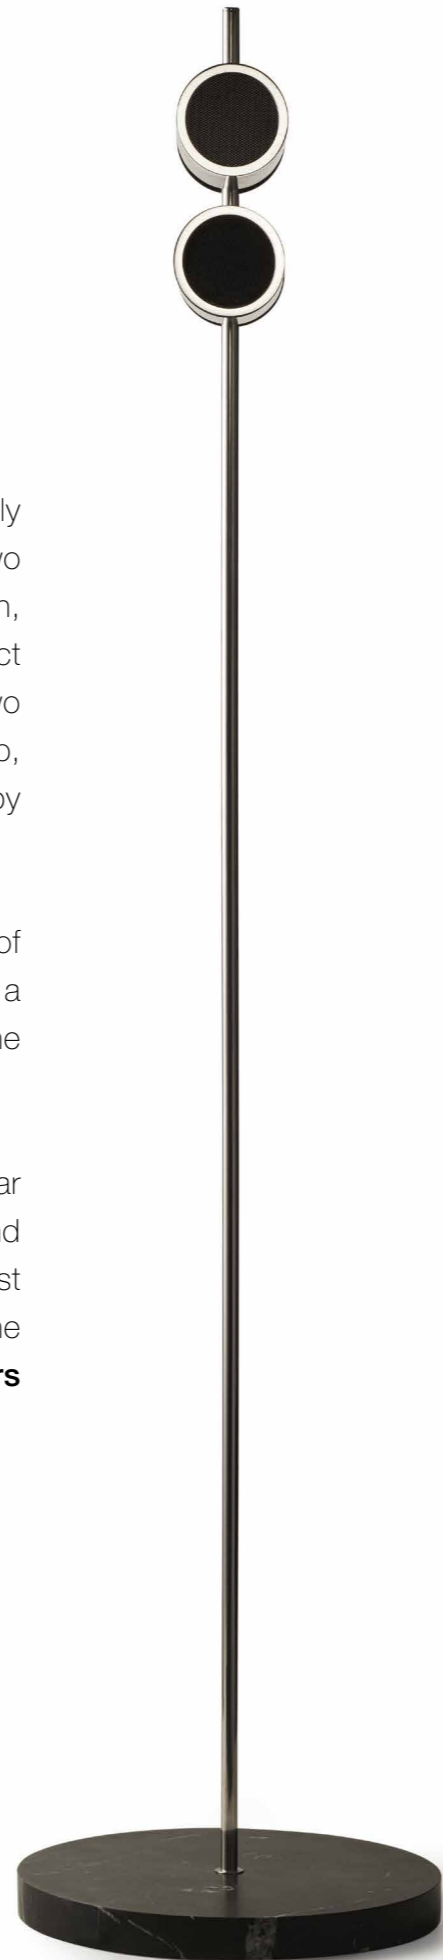

The concept behind the new paradigm of sound set by the new **ICARUS** family is best represented by the "ICARUS stand-alone" model, the first **all-in-one system** of this kind offering an extra wide coverage in a visually elegant and refined audio system, seamlessly integrating with any design or space without compromising on sound quality.

ICARUS is composed by a high performing and extremely compact subwoofer supporting a metal frame with two satellites that can be calibrated in terms of emission width, thanks to their adjustable mechanics. This ultra-compact system delivers a crystal-clear sound produced by the two adjustable 3,5" satellites supported by a deep, uncompressed bass, even at high output levels, released by its 8-inch woofer.

This "complementary" solution refers to the possibility of integrating omnidirectional elements placed at the center of a garden that includes directive elements (Icarus) on the borders, facing the desired listening point.

All models of the **ICARUS** family are all parts of a modular solution to be properly planned, according to the needs and the type of each installation. All aim at meeting the most complex and unique installation requirements, with the guarantee of professional quality of **B&C Speakers** loudspeakers, the heart of all **AS** products.

Icarus family models provide directive irradiation, giving an effect similar to a spotlight. Thanks to the adjustable "double-sound spotlight" the acoustic coverage angle can be adjusted to the needs, adapting from rather extensive (almost 140°) to small (70°) coverages.

Finishes are the **AS** classic ones, our hallmark: concrete and marble, that give uniqueness and elegance, combined with refined metallic finishes.
